AMBULATORY EEG

In-home, HD video Ambulatory EEG combining the latest technology with a pioneering patient service model.

Real Life / Real Time Results

Lab-quality recordings in difficult environments, such as the patient's home. The in-home environment ensures the best possible recording quality while minimizing the expense of a hospital-based referral.

Full Spectrum

A wide range of monitoring requirements are addressed with four, high-level DC, eight bipolar DC polygraphy, and 24 monopolar EEG channels.

**A VIDEO AEEG CAN
HELP PHYSICIANS
WITH PATIENTS
PRESENTING ANY
TYPE OF EPISODIC
SYMPTOMS CAUSED
BY NEUROLOGIC AND
NON-NEUROLOGIC
DIAGNOSIS SUCH AS**

Seizure Disorders / Epilepsy
Brain Tumors
Concussions
Dementia
Dizziness
Vertigo
Head Trauma
Memory Loss
Migraines
Psychiatric Disorders
Sleep Disorders
Stroke
Syncope

Continuous Monitoring

Up to 72 hours, with synchronization accuracy to one frame and infrared (IR) cameras that perform in dark environments to capture nocturnal events. 24-hour audio and video monitoring accurately correlate clinical information with the patient's ambulatory EEG.

Quick, Convenient, In-Network

Expedite results with faster turnaround time than hospital EMU and greater scheduling flexibility for patients. In-network with most major carriers and we handle all the prior authorizations.
