**PATIENT LED, IN-OFFICE TABLET BASED  
ASSESSMENT PERFORMED WHILE THE PATIENT  
WAITS.**

Identify depression, suicide risks, substance abuse concerns, and the six mental health conditions most affecting physical medicine in under seven minutes.

**Connected Mind®** uses **FAST Check®** technology to quickly triage patients for mental health conditions while they wait. Most patients complete the triage process in under a minute. For those that require further questioning, our intelligent system builds and administers a personalized interview for up to 6 mental health conditions, while also looking for risks of **suicide**.

### Physician and Patient Friendly

Once the patient completes the Connected Mind FAST Check, the doctor instantly receives an **easy to interpret mental health profile** for the patient - better preparing the doctor to understand and assess the patient's complete health picture.

### Identify Interconnected Conditions

If a patient suffers from depression, there is a 50% chance they also suffer from anxiety and a 30% chance they suffer from somatic symptom disorder. If a patient suffers from depression, then bipolar depression needs to be ruled out or the medication may send the patient into a manic phase.

### Billable

Billable to most major insurance, including Medicare. **Twelve applicable billing codes** so doctors get paid for the service they provide.
